Challenge Evaluation Criteria and Report Form

The BISA Challenge Committee will use the following criteria to make a recommendation to the BISA Executive Board to approve or deny a request by a player to challenge to the next higher age group.

1. Has the player acquired the skills recommended by USA Hockey for the age group that the player would normally play with and does the player have the skills necessary to participate at the older level? If no, list the skills that are lacking.

2. Does the player have the maturity level to fit in with the players of the older age group as defined by the player's conduct on the ice and in the locker room? If no, list the problems you foresee for the player if allowed to remain with the older team.

3. Is it in the best interest of this player to play with the older team to develop the player's hockey skills?

Losing a highly skilled player at the younger age group should not be a reason to deny the challenge.
