## How can I see specific page permissions?

### Page Access:

1. Select a page you have permissions on within your website, and toggle into Edit Mode.
2. Click on the **Permissions** tab. You will now see a listing of both Individual and Group Permissions that the Page has been assigned to

The screenshot shows the 'Permissions' tab selected in a yellow-themed interface. At the top, there are tabs for 'Content', 'Options', 'Permissions', and 'Groups'. Below the tabs, there are three buttons: 'DISABLED', 'PRIVATE', and 'PUBLIC', with 'PUBLIC' being the active selection. A message states 'Anyone can access this page.' Below this, the 'INDIVIDUAL PROFILE PERMISSIONS' section is visible. It includes a link to learn more about permissions and a note that a lock icon indicates inheritance from another page. A table lists permissions for 'Anyone' and 'Webmasters'. The 'Webmasters' group has full permissions (Owner, Edit, View). Below the table is an 'ADD PROFILE' button. The 'GROUP PERMISSIONS' section is also visible, with a similar link and inheritance note, and an 'ADD GROUP' button.

Profile	Owner	Edit	View
Anyone	-	-	✓
Webmasters	✓	✓	✓
